CURVE - the distinctive screen for various applications

CURVE is the projection screen system for immersive technology. This modular screen system allows you to create any curve or combination of contiguous curves and flats. Use Curve for simulation, panoramic views, museum installations and countless other applications. Be inspired!

CURVE with standard ground support on legs
screen size: Width 11m, Height 2,6m, Radius 4,2m

Panorama multidisplay projection on CURVE followed by a contiguous flat image area of 3.5m
screen size: Width 14,2m, Height 3,2m, Radius 7m

CURVE in combination with Desertscreen (three projector arms)
screen size: Width 6m, Height 1,8m, Radius 6,8m

The projection screen system CURVE consists of 64x32mm plug-in frame elements with pin-connections. Vertical supports are included to eliminate horizontal deflection and to guarantee maximum frame stability. The standardized modular frame design allows for easy "no tool" assembly and comfortable transport. The CURVE is typically set up on legs, but can be optionally equipped with hanging points for "flying" installations. The projection surface comes with special designed hooks to simplify its mounting and guarantees a tight fitting to the curved frame.

Specifications:

- Bending radius on custom request, min. 300 cm
- Height up to 400 cm
- Mounting solutions with legs or suspension points for "flying" installation
- Surface with special designed hooks for easy mounting
- Several front projection materials available
- 64x32mm plug-in frame system with connection-pins

Sizes:

- Custom-made product.
- The appropriate radius of your CURVE will be determined by several factors.
- Please contact us for your individual offer.
